### DETAILED ACTION

Claims 9,15, 19 and 28-35 are allowed.

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Hayden on September 2, 2004.

The application has been amended to correct antecedent basis as followed:  
Claim 32 (Amended). A computer-implemented method for multi-level memory domain protection, comprising:

executing calling-code at a protection level in a first process pair calling for execution of targeted code at the protection level in a second process pair; and

inter-group context switching from the first process pair to the second process pair, wherein the inter-group context switching establishes two levels of protection within the protection level.

2. The following is an examiner's statement of reasons for allowance: The claims are allowable for at least the following reasoning: Claims 9, 15, 19 and 28-30 all detail protecting the domain code from the user code by locating the domain code in the non-

executable reserved portion of the user process context second protection level.

Claims 31-35 all detail protecting domain code executing at a protection level from user code executing at the protection level by context switching to establish two levels of protection within the protection level. Applicant's invention enables three levels of memory domain protection to be achieved on hardware that supports only two levels of protection (page 11, lines 7-9). The third level is achieved by the user process context having a reserved area in which the domain code is located (page 11, lines 17-20). The user process context having a reserved area that stores domain code is not taught by any of the references alone or in combination. Additionally, it is this reserved area within the user process context that establishes two levels of protection within the protection level. The establishing of two levels within the protection level in essence, allows the use of three levels and as explained above is not taught by any of the references alone or in combination. The cited prior art of record at best teaches that domain codes make cross-domain calls to one another and the context is saved on a stack via context switching (see Kargar). The cited prior art of record do not teach or allude to a user domain have a non-executable reserved portion wherein domain code resides or the establishing of two levels of protection within the protection level as defined in the claims and specification. Therefore, the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis A. Bullock, Jr. whose telephone number is (703) 305-0439. The examiner can normally be reached on Monday-Friday, 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng An can be reached on (703) 305-9678. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
